Clinical Context
Your Digital Twin is a longitudinal physiological model constructed from 1.2 million data points collected during your initial 4-week enrollment phase.
We utilize Bayesian Inference to differentiate between natural variance (sleep, caffeine, stress) and clinical neurological shifts. The current week shows a 2.4% variance from your baseline, which remains within the "Stable" clinical threshold.

Assessment Overview
Comprehensive evaluation with detailed score calculations
Overall Score
51.0%
2.8% from baseline
Needs Attention - Multiple modules show decline from baseline. Immediate clinical intervention recommended.
Improved
4
Modules
Stable
1
Modules
Declined
0
Modules
How the Overall Score is Calculated
Each module score is normalized to a percentage based on its clinical range (0-100%). The Overall Score is the average of all normalized module scores. A score of 80% or above indicates stable clinical status, 60-79% requires monitoring, and below 60% indicates need for clinical intervention.
Module-wise Performance Analysis
Voice
Improved
+2.6%
Current: 88.4 Hz • Baseline: 86.2 Hz • Range: 82 - 95 Hz
Score 88.4
Speech pattern & tone analysis shows consistent improvement in vocal clarity, pitch stability, and articulation accuracy over the monitoring period.
Clinical Recommendation
Continue daily vocal exercises and maintain optimal hydration levels. Practice sustained vowel phonation for 5 minutes twice daily.

Engage in daily memory exercises including n-back tasks and maintain consistent sleep schedule of 7–8 hours.
Tremor
Improved
-20%
Current: 0.12 mm • Baseline: 0.15 mm • Range: 0 - 0.2 mm
Score 0.12
Motor control & stability shows significant reduction in tremor amplitude and frequency, indicating improved neuromuscular control and fine motor function.
Clinical Recommendation
Continue fine motor skill exercises including finger tapping and hand strengthening. Practice stress management techniques.
Typing
Improved
+3.1%
Current: 42.8 ms • Baseline: 41.5 ms • Range: 35 - 55 ms
Score 42.8
Motor coordination & rhythm indicates improved typing speed, accuracy, and inter-keystroke interval consistency reflecting better motor planning.
Clinical Recommendation
Practice daily typing exercises and maintain regular hand stretching routines. Focus on accuracy before speed.
Face
Stable
-1%
Current: 0.96 idx • Baseline: 0.97 idx • Range: 0.9 - 1 idx
Score 0.96
Emotional expression & symmetry remains within optimal range with minor variations. Facial muscle coordination shows consistent bilateral symmetry.
Clinical Recommendation
Continue facial expression exercises and monitor for any significant changes. Practice mirror-based facial recognition tasks.

NeuroTwin Clinical AI
Grounded in your Digital Brain Twin data
Online
Hello! I am your NeuroTwin Clinical AI Assistant. I have analyzed your Digital Brain Twin profile and am ready to help you understand your neurological health metrics.
Just now
Why did my score change?
Just now
Your Brain Health Score adjusted by -3 points from last week. The primary contributors are:
• **Typing Latency**: +13% increase (46.8 ms vs 41.5 ms baseline)
• **Voice Pitch Stability**: -4.2% shift from personal baseline
Hand tremor and memory recall remain optimal.
